

INTRODUCTION

- High-quality childcare has been linked to positive child outc including higher cognitive scores (e.g., Burger, 2010).
- This link appears stronger for children from low-income fam (e.g., Leob et al., 2007), but the cumulative effects of protection facto as higher socio-economic status (SES), a larger social supp network, and childcare quality have not been explored.

OBJECTIVE

This longitudinal study aims to explore how cumulativ protective factors are linked to children's cognitive development at four, five and seven years old.

METHOD

Sample

- Part of a larger study on young children's living environment
- The participants were **154 children** (82 girls),
 - 113 of whom had consistently attended center-b childcare beginning in their second year of life,
 - and 41 who were cared for at home by their par

Procedures

- Recruitment took place from 2009 to 2010 in Montreal (QC, Canada)
- Data collection took place when children were 4-, 5- and 7-y old
 - Trained observers evaluate children's development;
 - Parents completed a questionnaire.
 - Process Quality of childcare was also observed when children were four.

Measures

Table 1. Dependents Measures (children)

Cognitive Development

At four and five years old:

Weschler Preschool and Primary Scale of Intelligence- Third edition (V III) (Weschler, 2002).

- Verbal score (VQI)
- Performance score (PQI)
- Full Scale score (FQI)

At seven years old:

Wechsler intelligence scale for children—Fourth edition (WISC-IV) (we 2004),

- Verbal score (VQI)
- Performance score (PQI)
- Full Scale score (FQI)

A Longitudinal Study of Cognitive Development In Childcare: The Role of Protection Factors at 4-, 5- and 7-Years-Old

DISCUSSION

sis revealed:

two-way interaction for age and childcare for children with fewer protection factors; not attend childcare :

se between four and seven years old.

on effect for children with more protective factors.

t of childcare attendance on the cognitive or children with fewer protective factors.

fewer protective factors in childcare obtain the scores as children with more protective factors at

oted that a lower percentage of children with less than 3protective factors attend childcare. • Do higher-SES families select higher quality childcare programs?
